**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1-11 and 13-21 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art fails to either singly or in combination disclose a circuit arrangement for a remote control receiver comprising a photodiode configured to receive a light signal and generate an output signal that includes an AC component and a DC component, a control unit configured to control the photodiode to operate in a forward or reverse direction operating mode based on the AC component regarding figure (1) and figure (4); a method of operating a remote control receiver comprising operating the photodiode in a forward or reverse direction operating mode, setting the reverse direction operating mode of the photodiode when a signal level or useful signal level of the photodiode exceeds a predefined threshold by providing a first current at a higher value than in the forward direction operating mode, and providing a second current such that a DC voltage across the photodiode is about half an operating voltage of the remote control receiver regarding claim (6); and a circuit arrangement for a remote control receiver comprising a plurality of photodiodes arranged as a series circuit providing an output signal having a DC component and an AC component, and a controlled current source configured to provide a bias current to the series circuit based on the AC component regarding claim (8).

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Don Williams whose telephone number is 571-272-8538. The examiner can normally be reached on 8:30a.m. to 5:30a.m..
